

Specialists in the chemistry of essential oils.

Australian Botanical Products

At ABP, we have the knowledge, facilities and capabilities to meet any price and application needs that our customers require.

Knowledge, Capability and Quality

- Staff with international experience in industry, allowing for cutting edge development
- We can follow the market and match the trends, as well as sharing with you some of our own inspirational thoughts
- Modern machines, equipment and manufacturing capabilities
- Ingredients are large in number, which include some of today's newest molecules enabling us to call on a sophisticated palate

Research and Development

- The ABP staff include applications chemist, analytical chemist and perfumers
- Our staff have international experience in the industry, which allows for cutting edge development and a depth of knowledge not found elsewhere
- Planting for the future, to bring innovative new ingredients into our palate as well as solutions to some of today's raw material shortages

Application

We design our products around your end application to ensuring our products perform in yours. During the development process we will trial and sample to you the finished products or formulate using your own base product.

Testing

- ABP's equipment and staff capabilities allow us to conduct extensive testing and matching services
- We can then Match, Modify, and Improve your current products to help your product perform better or to offer a more competitive solution

Australia's leading supplier of essential oils

At ABP, we are devoted to developing and supplying the industry with quality and innovative products to the market.

Passionate about purity

From a particular species, grown in a specific region of the world and most importantly free of adulteration we guarantee the purity of our products.

Excited about the little things

Trace elements shown in a GC/MS reveal far more about the authenticity of an essential oil than the major peaks – we study the entire fingerprint to ensure that even the smallest trace of adulterant is not present. abp's technical team are leader in capturing even the most sophisticated adulterated oils making it our passion to ensure we setting the highest standards in the industry.

Devoted to Quality

Manufacturing under the industry standards of GMP, our facility include a state of the art laboratory and clean room approved by the TGA (Therapeutic Goods Administration). We trace our oils through all stages of supply, accurately recording the quality and use of each oil.

Tempted by the exotic

We source our ingredients directly from growers and producers worldwide. We house an extensive range of over 250 different essential oils - including exotic and rare species and the latest molecules for flavour and fragrance applications.

Committed to Research

We have an expert team of technicians continually researching new products and ingredients, led by specialists in the fields of essential oil, pharmacology, perfumery and chemistry.

Planting for the future

ABP have recently invested in a number of new plantations to bring new and interesting essential oils to the market. In addition we have acquired the rights to wild harvest many existing trees and plants to offer short term solutions to some of today's raw material availability issues.

Expanding our resources

For over 30 years we have built a comprehensive library and database registering the results of every batch of essential oil tested. This gives us an unprecedented resource within Australia expanding our technical capabilities beyond that of our competition.

Australian Government and Industry Certified Standards

The Therapeutic Goods Administration is part of the Australian Federal Government's Department of Health and Ageing. It ensures that stringent standards are enforced for products intended for a therapeutic use i.e. anything that improves, relieves, prevents or changes a person's health or physical condition.

The GMP (Good Manufacturing Practice) is an internationally recognized standard controlled by P.I.C.S. (Pharmaceutical Inspection Convention Scheme

ABP have been accredited for both TGA and GMP certification which gives you peace of mind that they are getting what they are paying for – the ingredients used are 100% pure and natural, from the correct botanical species, thoroughly tested for adulteration, and sold at the best price.

ABP is also a licensed processor of certified organic materials in Australia. The certifying body in the country is the Biological Farmers Association (BFA) and the certification given to approve products is Australian Certified Organic (ACO).

Product Range

With an extensive range of products, ABP endeavours to source the right products for each customer.

Essential Oils

Australia's original and most experience supplier

Different Essential Oil Qualities

100% Pure & Natural - Aromatherapy grade essential oils that are 100% pure & natural. The oil is sourced from the named botanical species and only one geographical location or origin, the 'named source'. For example, Lavender Bulgarian comes from Lavandula angustifolia, sourced from Bulgaria.

Natural - These essential oils are 100% natural. They may contain essential oils from difference sources and blended together to meet a customer's specification or application requirement.

Nature Identical - These oils can contain synthetic products, added to meet the need of the application whether it is for performance purposes or economic advantages.

International Standards - A collection of essential oils carefully selected to meet the international standards like BP, EP, USP and FCC.

Aromatic Chemicals

A large on-site inventory of aromatic chemicals to support the local Flavour & Fragrance markets and related industries.

Vegetable Oils

Extensive on-site stocks of various qualities including Refined, Virgin and Organic.

Fragrance

Comprehensive on-site facilities to produce fragrance concentrates for wide variety of applications.

Fragrance Development Service & Customized Blends

- Off the shelf fragrance range for Candles, Soaps and Personal Care applications
- Automated compounding machine allowing for accurate dispensing to our customers specification, in full, every time
- In-house product development
- Essential Oil blends to customer specification / application requirements
- In depth on-site technical resource including a strong team of chemists, perfumers and product development experts
- Natural and Nature Identical Essential Oil blends to meet customer specifications, international standards or economic advantages

Finished Products

On-site product development and TGA approved filling lines allows abp to provide a full service from product development or sourcing from origin straight into a finished product, all 100% Australian made.

Finished Products (also available in bulk)

- 100% Pure Essential Oils
- Essential Oil Blends & Massage Oil Blends
- Treatment Oils & Facial Serums
- Scrubs & Bath Salts
- Body Butters & Lotions (Face & Body)
