

Absolutes

Used in perfumery and aromatherapy, absolutes are similar to essential oils. They are concentrated, highly-aromatic, oily mixtures extracted from plants. Whereas essential oils can typically be produced through steam distillation, absolutes require the use of solvent extraction techniques or more traditionally, through enfleurage. The intense labour involved with picking and processing, as well as very low yields obtained, make these absolutes extremely expensive; often more than 1 tonne of flowers makes only one litre of oil. abp natural flower Absolutes are guaranteed to be 100% pure and natural
